

B

BLOCKED

Cross-city Spearman correlations

(climate/canopy/density/flows/walk-bike share/vulnerability/size)
with bootstrap CI

Missing inputs:

- Figure 5's optimization output (integrated-strategy performance per city) -- never executed, see figure5 notebook
 - v2 thermal pipeline (canopy fusion + building shadow + four-state decomposition) complete for enough cities to support cross-city statistics -- only Palma fully validated at notebook build time; Bilbao/Sevilla Phase 2 in progress
 - needs ≥ 6 -8 cities with complete data for a defensible few-predictor Spearman analysis
